

Hydraulic & Water Jetting Overview

2244N

Multi-purpose hose used in hydraulics and water jetting, spiral and braided construction.

2380N

High pressure service for use within different industries. Replaces high pressure rigid tubing where vibration and routing constraints are a concern. Used also for hydraulic controls, test systems with synthetic and phosphate ester fluids.

2388N

High pressure service for the construction and shipbuilding industries and for general industrial cleaning applications. Also used with hydraulic lifting equipment and tools.

Features
